INVESTOR FACT SHEET · NOVEMBER 2026

Highest-grade copper drill results recorded in the Bathurst Mining Camp

Critical minerals exploration across 146 km² in the world-famous mining district that is home to Brunswick No. 12. Copper leads at both flagships: **Nine Mile Brook** and **The Wedge**, a past-producing copper mine now drilling Phase 3.

146 km²
Four projects in the Bathurst Mining Camp

4,934.5 m
18 holes drilled of the 10,000 m Phase 3 program

6.5 km
Wedge VMS Trend · current drill program

Modeled TDEM plates at Tribag–West Wedge

FLAGSHIP The Wedge Project

PHASE 3 · TWO RIGS DRILLING

36.08 km²

They mined 1.5 million tonnes.

Past-producing copper mine — Cominco, approximately 1.5 Mt at 2.88% Cu, mined 1962–1968, the highest-grade copper deposit ever mined in this camp. Nine Mile Metals' three drill programs have confirmed and increased the deposit footprint.

CERTIFIED DRILL INTERCEPTS

PHASE 1–3 · SELECTED HIGHLIGHTS

HOLE		INTERVAL	GRADE CuEq	INCLUDES CuEq
WD-24-07	P1 · 2024	40.32 m	1.65%	13.12 m @ 2.29%
WD-25-01	P2 · 2025	22.65 m^{tw}	3.83%	17.65 m @ 4.33%
WD-26-09	P3 · 2026	24.55 m^{tw}	3.49%	16.50 m @ 4.03%
WD-26-10	P3 · 2026	31.95 m^{tw}	2.52%	14.15 m @ 3.73%
WD-26-14	P3 · 2026	14.15 m^{tw}	5.09%	9.00 m @ 6.35%
WD-26-18	P3 · 2026	11.65 m^{tw}	7.13%	6.70 m @ 9.93%

and 6.50 m @ 5.22%

News release 12 August 2026

The Wedge Project 36.08 km² Wedge, West Wedge and Wested sit on one trend. Bedrock geology, APEX Geoscience, October 2026.

DDH WD-26-09 — **bornite** copper sample #396431 (104.00–105.00 m) · Figure 1, news release 12 August 2026

PHASE 3 · 2026 · TWO RIGS ACTIVE

FURTHER ASSAYS PENDING · ALS GLOBAL

Eight certified results from Phase 3, each intersecting polymetallic mineralization

WD-26-07, -09, -10, -11, -12, -14, -15 and -18 — copper, lead, zinc, silver and gold in every hole.

Deposit open in all directions — east, west and at depth.

Every new meter feeds the resource. APEX Geoscience has built a live 3D model including all Cominco historical drill data and all Nine Mile Metals' previous and ongoing drill programs. Eight BHEM surveys will guide the second 5,000 m phase.

Drill results. Selected certified intercepts per Company news releases; WD-26-07, -11, -12 and -15 not shown; tw = true width. Certified assays for all intervals shown; remaining Phase 3 assays pending. Analyses by ALS Global, Moncton, except WD-25-01 by Actlabs — both accredited and independent of the Company. WD-25-01, WD-26-09, -10, -14 and -18 intervals are true widths; all others are drilled core lengths, true widths not yet known. CuEq is not comparable between holes: each uses the prices, recoveries and QA/QC in its own news release on SEDAR+. Wedge production figures are historical (McCutcheon et al., 2005), predate NI 43-101 and are not current resources. Qualified Person and forward-looking disclosure on page 2.

FLAGSHIP

Nine Mile Brook Project

BULK SAMPLE · UNDERWAY

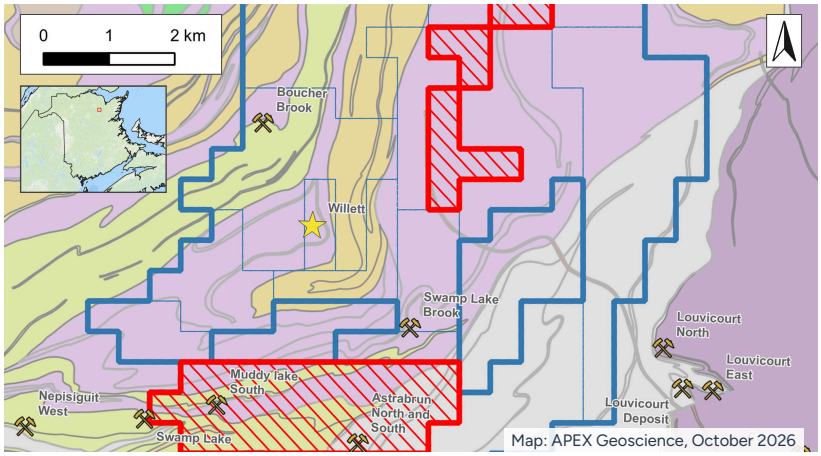

59.50 km²

The highest-grade copper drill hole in the camp's history.

A copper-rich VMS lens, the highest grade in the Bathurst Mining Camp. 14.42 km² of new claims acquired October 2026; Phase 2 program planned for May 2027.

CERTIFIED DRILL ASSAYS

HOLE	INTERVAL	Cu %	Zn %	Ag g/t	Au g/t
NM220003	10.45 m	6.92	5.60	179.28	1.33
NM220004	15.10 m	10.12	1.00	91.47	0.84
incl. Zone 1 VMS	*6.36 m*	*14.46*	*1.50*	*137.51*	*1.19*
NM220005	11.00 m	9.69	11.93	283.31	1.65
NM220006	10.40 m	3.07	7.35	175.28	1.69
